I am writing to apply for a Summer Research Assistant role at Robinson Research Institute. I am a third-year engineering student at VUW studying Electronic and Computer Systems, last year I had the privilege of receiving a summer scholarship to work at Robinson of the Overhead Lines project and was immediately impressed by the collaborative and innovative energy from everyone I met. The opportunity to return to such a creative, and world-leading team is exactly the direction I want to take my career and believe my drive, experience, and enthusiasm makes me a great fit for the role.

I began my journey to becoming an engineer because of my love for physics and mathematics and during my time at university I have developed my skills and honed my interests.

Over the past two years, I have been able to spend time on my own projects; I designed and wrote a cloud IOT flowrate sensor, designed a custom audio mixing and sequencing PCB, bought a 3D printer and have been practising my mechanical CAD design.

In my time at RRI I was able to not only gain skills and experience with a more complex signal processing problem by also strongly develop my teamwork, communication, and presentation skills.

My enthusiasm for interesting and challenging work is boundless, and I strive to always bring my positive energy to every work environment. I would love the opportunity to further discuss my interest in the position

Thank you for your time and consideration.

Daniel Eisen
