

CLASS TEST 2 – 2020

TRIMESTER 1

ECEN 321

ENGINEERING STATISTICS

Time Allowed: THIRTY TWO HOURS

OPEN BOOK

Permitted materials: All.

Instructions: Attempt ALL Questions.

NOT all questions have the same marks value.

There are 50 marks in total.

| Derive an expression for the mean and variance of a continuous random X which is uniformly distributed on the interval $[a, b]$. | om variable |
|---|-------------|
| (Note: There are <i>no</i> marks for the answers, only for the working). | |
| (a) Mean: | (2 marks) |
| (b) Variance: | (4 marks) |

(6 marks)

1. Distributions

2. Uncertainties (5 marks)

We wish to measure a change between two independent measurements, expressed as a proportion of the initial value i.e., $y = (x_2 - x_1)/x_1$.

(a) If $x_1 = 1.11 \pm 0.01$ and $x_2 = 0.99 \pm 0.01$, what is the value of y? (1 mark)

(b) What is the uncertainty in *y*?

(4 marks)

| 3. | Exponential | Distribution |
|----------|-------------|-----------------|
| \sim . | Emporterium | DISCITION COLOR |

(7 marks)

(a) Derive the formula for the mean of an exponential distribution having parameter λ .

(There are *no* marks for the answers, only for the working.) (4 marks)

(b) The distance between flaws on a long cable is exponentially distributed with mean 10 m. Find the probability that the distance between two flaws is greater than 15 m. (3 marks)

| 4. | Esti | mation | (8 marks) |
|----|------|---|-----------|
| | (a) | List two desirable properties of estimators. | (2 marks) |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | (1.) | | 1 41 |
| | | Give mathematical definitions of the two quantities that govern v not an estimator has these two properties. | (4 marks) |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | (c) | Explain why these two properties are desirable. | (2 marks) |
| | (C) | Explain why these two properties are desirable. | (2 marks) |
| | | | |
| | | | |
| | | | |
| | | | |

5. Maximum Likelihood

(7 marks)

Suppose you have flipped a biased coin N times, and observed k heads. Derive the maximum likelihood estimate of the probability p of the coin producing heads.

(Note: if you know that both heads and tails are possible, then there are better Bayesian ways of approaching this problem, but to keep this simple, just stick to the maximum likelihood estimate).

6. Confidence Intervals

(6 marks)

A simple random sample of 15 small cars were subjected to a head-on collision test, and 11 of them were "written off" (i.e., the cost of repairs was greater than the value of the car). Another sample of 12 large cars was subjected to the same test, and 4 of them were written off. Find a 96% confidence interval for the difference in proportions of the small cars and large cars that were written off.

(Even though use of the central limit theorem in this question is tenuous to say the least – use it!)

| 7. | Hypothesis Tests | (7 marks) |
|----|---|--------------|
| | An instrument is properly calibrated if the mean measurement error a sample of 49 measurements the sample mean of the error is $20 \mu\text{V}$, v dard deviation of $36 \mu\text{V}$. We wish to form a test of whether or not the is properly calibrated. | vith a stan- |
| | (a) State carefully an appropriate null hypothesis and the correspondent hypothesis. | ding alter- |
| | | (2 marks) |
| | (b) Find the <i>P</i> value for the test. | (3 marks) |

(c) Is it plausible that the instrument is calibrated, or are you convinced that it is out of calibration? Explain your reasoning. (2 marks)

8. Traffic (4 marks)

A car insurance company is setting up a 0800 number and call centre for new customers. They estimate that during the busy hour the (Poisson) call arrival rate is 3 calls per minute. The mean call duration (assumed exponentially distributed) is 7 minutes. The company assumes that customers who encounter congestion on calling will immediately call their competitor, and don't want this to happen for any more than 5% of callers.

(a) What is the busy hour traffic load? (provide the value and the units)

(2 marks)

(b) How many operators does the call centre require to meet the availability target? (2 marks)

Normal Distribution
