Matlab & Simulink

Matlab, along with Simulink, is available for all ECS students to download on to their machines for free! If you go to this site:

https://downloads.victoria.ac.nz/content/softwaretitles.aspx

and log in with your student credentials, you will find the linux, mac and windows versions of matlab.

When you're installing it, make sure you are connected to the internet, as you will directed to the mathworks website during installation. At this site you will be given a license for the software (you may need to create a mathworks account).

When you're installing matlab, you are given options as to which toolboxes you want to add. For ECEN315, we will be using standard toolboxes, but it might be a good idea to install the statistics toolbox for ECEN321.

If you do miss the "install toolboxes" step, not to worry, in the top menu of matlab there is an "add-ons" drop-down menu that allows you to retrospectively install toolboxes.
